

Almond FinTech Launches Performance Analytics & Benchmarking Platform

Boston, MA, November 10, 2025 — Almond FinTech will be demonstrating its Performance Analytics & Benchmarking Platform at this year's Singapore FinTech Festival, November 12 -14 at booth #4L34.

The first-of-its-kind platform delivers a comprehensive set of dashboards and analysis tools for exchange rate data across multiple blockchain networks and stablecoins. It is the first to provide crypto-forex market correlation data, real-time performance tracking against mid-market FX, and precise timing analytics across more than 100 tokens and chains.

The platform enables market data providers, information brokers, exchanges, token issuers, and liquidity desks to make measurable, evidence-based decisions supported by transparent analytics.

“We recognized a fundamental gap — not just in data availability, but in the analytical tools needed to truly understand stablecoin FX and crypto markets more broadly,” said Adam Swartzbaugh, CEO and Co-Founder of Almond. “This platform goes far beyond publishing prices. It delivers real-time intelligence that quantifies performance, uncovers timing advantages, and enables smarter, more strategic decisions — down to the specific token, chain, and corridor.”

Built on the same AI-optimized infrastructure that powers Almond's programmable, multi-chain FX routing engine, the Performance Analytics & Benchmarking Platform provides crypto/forex market correlation data, real-time and historical datasets across 100+ stablecoins and other tokens, performance tracking versus mid-market FX, bridge token performance insights, and compliance-first APIs that make complex data instantly actionable.

Almond's mission is to unify global financial infrastructure, enabling money to move with the speed, precision, cost-efficiency, and accessibility of data. Originally developed to quantify basis-point improvements from Almond's proprietary routing orchestration, the platform has since evolved into a standalone intelligence layer — offering real-time, data-driven insights as an independent product.

The Performance Analytics & Benchmarking Platform extends this advantage to data analysis across the crypto and stablecoin ecosystem.

About Almond

[Almond FinTech](#) has built the intelligence layer for global money movement. Its programmable cross-border FX treasury and payments orchestration engine routes

across multiple tokens and blockchains, executing at the optimal time to deliver market-beating FX rates, fiat-to-fiat, T+0, 24/7/365.
