DoveRunner Unveils Mobile Application Threat Alerting at Singapore FinTech Festival 2025

A breakthrough capability delivering real-time intelligence on mobile app security threats.

Singapore, [Insert Date] — DoveRunner, a leading provider of mobile application security and runtime protection technologies, today announced the launch of its **Mobile Application Threat Alerting** feature at the **Singapore FinTech Festival 2025**. This new capability provides real-time visibility into evolving mobile security threats, empowering organizations to respond faster and smarter to potential risks targeting their applications.

The Threat Alerting system leverages data patterns to analyze attack data and detect patterns across Android and iOS applications. It automatically delivers periodic updates straight to users' email or Slack channels, offering concise, actionable insights without the need to manually access the security dashboard.

Key Capabilities of Threat Alerting

- **Attack Trend Insights:** Identify emerging threats and understand which attacks are impacting your apps the most.
- **Comprehensive Threat Coverage:** From app tampering, rooting, and emulator usage to cheat tools and reverse engineering attempts.
- **Continuous Monitoring:** Automatically generated alerts that summarize activity trends on a regular cadence.
- **Multi-Channel Delivery:** Alerts delivered directly via email or Slack, ensuring cross-team awareness and quick action.

Why It Matters

With mobile threats becoming increasingly sophisticated, Threat Alerting bridges the gap between data and decision-making. It empowers security, product, and compliance teams with timely insights that simplify understanding of the attack surface, impact, and mitigation priorities—all without having to log into complex dashboards.

> *"Continuous monitoring with automation is reshaping how security teams stay informed," said **James Ahn, Founder & CEO, DoveRunner**. "With Threat Alerting, we're putting real-time intelligence in the hands of decision-makers, helping them stay one step ahead of attackers while saving time and effort.*"

The launch underscores DoveRunner's ongoing commitment to innovation in mobile app shielding, runtime protection (RASP), and threat visibility — critical areas for fintechs, banks, and digital platforms safeguarding customer trust and data integrity.

Availability

Threat Alerting is available immediately as part of **DoveRunner's Mobile Security Suite**. Demonstrations and live use cases will be showcased at the **DoveRunner booth 4G25** during the **Singapore FinTech Festival 2025**, held from **November 12–14, 2025**, at the **Singapore EXPO**.

About DoveRunner

DoveRunner is a trusted provider of mobile application protection, RASP (Runtime Application Self-Protection), and threat intelligence solutions. Its comprehensive suite helps organizations secure mobile apps against tampering, reverse engineering, and runtime attacks — ensuring a safe and resilient user experience for financial, OTT, and digital enterprises worldwide.
