

Exclusive SFF Preview: WINNING.I Introduces World-First Mobile Simultaneous Fingerprint & Face Verification to Singapore

At Singapore FinTech Festival 2025, WINNING.I will preview AEROX eKYC, the world's first fully-mobile solution capable of simultaneously verifying fingerprints and facial biometrics, ahead of its global debut in February 2026.

Multimodal biometrics are widely shown to outperform single-modality approaches. Research referenced by NIST indicates that combining fingerprint and face matching can reduce false-reject rates by over 60%, compared to evaluating each independently. AEROX eKYC applies this simultaneous verification approach on standard mobile devices, delivering high-trust identity checks without dedicated hardware.

Built for regulated and high-security environments, AEROX eKYC enables contactless fingerprint capture and facial recognition directly on a smartphone. The solution is designed to interoperate with existing government and financial identity systems, supporting secure digital onboarding for banking, fintech, and cross-border identity use cases.

At SFF, WINNING.I will showcase live simultaneous face-and-fingerprint verification on mobile devices, marking its first public demonstration in Singapore ahead of the planned 2026 launch, and highlighting its approach to interoperability with existing identity infrastructure.
